Average daily eastbound and westbound volumes by class (condensed to the AQMA scheme), including 12hr totals for each hour. Calculated from all available data over 7 days.

# METHODOLOGY

## Equipment & methodology

Automatic traffic counts are undertaken using a pair of pneumatic tubes installed securely across the carriageway, one metre apart, recording air pulses to determine vehicle speed, class and volume. The ATC equipment generally remains in place for a consecutive seven day period, and the data analysed post-survey.

In queuing conditions, the accuracy of ATC recording equipment will reduce as follows;

- 20 – 30mph: potential reduction of 9% accuracy in volume values
- 10 – 20mph: potential reduction of 26% accuracy in volume values
- 00 – 10mph: potential reduction of 39% accuracy in volume values

These figures are based on multiple ATC results compared against accepted reference values from resilient manual counts.

AADTs are calculated using the seasonal COBA methodology; DMRB Vol. 13, Pt 4: Traffic Input To COBA.

Full datasets available in worksheets DIR1 and DIR2.

## Weather & environmental

Inclement conditions during winter months or outbreaks of unseasonable weather may affect survey data collection. This can result in distorted traffic flows or unusable data and should be considered prior to survey approval. Although forecast checks are made prior to the survey commencing, Essex Highways cannot be held responsible for the forecast accuracy.

## Equipment damage &

Although checked interm duration of the survey, ar stolen and Essex Highway not been captured.

The equipment is located Highways cannot be held due to theft and vandali

## Roadworks & events

Where possible, roadwor survey commences. Addit covering the immediate v outcome of the survey.

or 0700-1900 and overall average percentages.

## **Equipment damage & failure**

Intently the equipment remains unmanned for much of the period and can potentially be interfered with, vandalised, damaged or destroyed. Essex Highways cannot be held responsible for any periods where data has been lost.

In accordance with the details provided by the client and Essex Highways, Essex Highways is not responsible for the accuracy of the data or loss of equipment or damage to the equipment.

## **Roadworks & events**

Surveys checks are made 10 days before, and 48 hours before, the survey. Additionally, influencing major local events are also monitored, including the vicinity of the surveys and any routes likely to affect the survey.

## **Vehicle classifications**

Vehicles recorded by the ATC are placed into one of ten vehicle classes based on axle spacing and pattern. This scheme is based on the AustRoad 94 algorithm and modified for UK traffic, referred to as ARX. The table on the left aligns the ARX classifications with the COBA Chapter 8 (Vol 13, Sec 1) classifications, AQMA (air quality management standard) and the Essex 9-class, as used in manual junction counts undertaken by Essex Highways.

## **Disclaimer**

Although every attempt is made to achieve accuracy, neither Essex County Council nor Essex Highways may be held liable for errors of fact or interpretation.
